MCA301	COMPULSORY	Design Methods and Analysis of Algorithms	3	1	0	4	60	20	20	0	0

LEGENDS: L -Lecture; T -Tutorial/Teacher Guided Student Activity; P –Practical; C -Credit; Q/A – Quiz/Assignment/Attendance, MST -Mid Sem Test.

\*Teacher Assessment shall be based on following components: Quiz/Assignment/Project/Participation in class (Given that no component shall be exceed 10 Marks)

**Course Educational Objectives (CEOs):**

- To familiarize the students with the need and scope of the subject.
- To develop the analytical skills of students so that they can better understand the problem and devise algorithms efficiently.
- Using simple and well drawn illustrations develop their analytical and programming skills.
- To cover the various data structures and their applications so that aspirants can explore this territory
- To take on the more challenging concepts.

**Course Outcomes (Cos):** After the completion of the course the student will be able to

- Understand the real world problems and model them
- Understand the algorithms and the algorithm design process
- Choose a suitable strategy to devise solution of a given problem
- identify, formulate and solve programming problems
- select appropriate data structures for the solution of a given problem
- analyze the algorithms for correctness and in terms of complexity for best, worst and average cases
- function on multi-disciplinary teams
- understand the professional and ethical responsibility

**Pre-requisites:** Data structure and discrete structures, models of computation.

**Unit-I**

Introduction to Algorithm: Definition, Criteria of Algorithm, Algorithm Analysis, Time and Space complexity, Asymptotic notation: Big Oh, Omega and Theta, Best, Average and Worst case analysis.

MCA301	COMPULSORY	Design Methods and Analysis of Algorithms	3	1	0	4	60	20	20	0	0

**Unit-II**

Design of Algorithm, Types of algorithm strategies, Recurrence relation: Master method, Substitution method, Analysis of algorithm, Brute-force approach: Sequential Search, Selection Sort.

Divide and Conquer: Structure of divide-and-conquer algorithms: Binary search, Merge sort, Quick sort, Strassen's Matrix Multiplication, Analysis of Divide and Conquer methods, Comparison of Searching and Sorting Algorithms.

**Unit-III**

Graph searching and Traversal: Overview, Traversal methods (Depth First and Breadth First search), Greedy Method: Overview of the greedy paradigms, examples of exact optimization solution (minimum cost spanning tree), Approximate solution (Knapsack problem), Single Source Shortest Paths.

Branch and Bound: LC searching Bounding, FIFO and LIFO Branch and Bound, LC Branch and Bound application: 0/1 Knapsack Problem, Traveling Salesman Problem.

**Unit-IV**

Dynamic programming: An Overview, Difference between Dynamic Programming and Divide and Conquer, Applications: Shortest Path in Graph, Matrix Chain Multiplication, Traveling Salesman Problem, Longest Common Sequence. Back tracking: Overview, 8-Queensproblem, and Knapsack problem

**Unit-V**

Computational Complexity: Complexity measures, Polynomial Vs non-polynomial time complexity; NP-hard and NP-complete classes, Relation among P, NP, NPC and NPH, Examples. Combinational Algorithms, String Processing Algorithm, Algebraic Algorithms, Set Algorithms.

 (Given that no component shall be exceed 10 Marks)

**Course Education Objectives (CEOs):**

- To provide knowledge about system development.
- To impart knowledge about software process models.
- To provide detailed knowledge about software design.
- To acquaint students with software quality and testing.
- To provide study of MIS.

**Course Outcomes (COs):** Students will be having:

- An ability to understand system design and its constraints.
- An ability to apply knowledge of software engineering.
- An ability to design a system, a component or process to meet desired needs.
- An ability to identify, formulate and solve engineering Problems
- An ability to measure and to understand quality issues.
- An ability to understand MIS and DSS.

**UNIT -I**

Introduction to Software Engineering: Software problem, Software engineering problem, Software engineering approach, Software characteristics and Applications. System’s concept, characteristics of system, elements of system, The System Development Life Cycle, The Role of System Analyst.

**UNIT -II**

Software Processes: Software processes and its components, characteristics of software processes, Software development processes: Linear Sequential model, Prototyping model, RAD model, Iterative Enhancement model, Spiral model, Component based development, Comparative study of various development models.

**UNIT-III**

Software Project Planning: Project planning objectives, Decomposition Techniques, Empirical estimation models, The Make/Buy Decision., Risk analysis. Software Design: Design Principles, Cohesion & Coupling.

**UNIT-IV**

**Software Quality Assurance:** Quality Concepts, The Quality Movement. Software Reviews: Formal Technical Reviews. Statistical Software Quality Assurance, Software Reliability. **Software Testing Techniques:** Testing fundamentals, White box testing, Black box testing. Testing Strategies: A strategic approach of software testing strategic issues, unit testing, integration testing, validation testing, system testing.

**UNIT-V**

MIS & DSS: Introduction to MIS, long range planning, development and implementation of an MIS, Applications of MIS in manufacturing sector and service sector. Decision Support System concepts, types of DSS.

**Text Books:**

1. R. S. Pressman, "Software Engineering – A practitioner's approach", 6th ed., McGraw Hill Int.
2. Pankaj Jalote "Software Engineering", Kindle Edition, Wiley Publications.
3. Ian Sommerville : Software Engineering 6<sup>th</sup> edition (Addison-Wesley).
4. Richard Fairley : Software Engineering Concepts (TMH).
5. Elis Awad, "System Analysis & Design", Galgotia publications.
6. W.S. Jawadekar: Management Information Systems, TMH Publication, India.

**Practical List:**

1. To study the Software Development Life Cycle.
2. To understand and apply good Software Analysis and Design practices
3. To study Data Flow Diagrams (DFDs) and levels in DFDs.
4. To create Data Dictionary for some applications
5. To use various information gathering tools (Questionnaire, Interview, On Site Survey)
6. To choose suitable software development process models for developing different applications.
7. Perform Feasibility Study and to create Feasibility Report for applications.
8. To make decision whether to buy/lease/ develop the software.
9. To understand and create Use Case Diagram.
10. To study Functional Point Analysis.
11. To devise Test Cases for software testing, black-box, white-box testing and different types of testing.
12. To study the Risk Management during the software development.
13. To assure Quality of Software, Statistical Software Quality Assurance, Reliability of Software.
14. To understand and apply concepts of Project Management
15. Case study (MIS and DSS)

### Course Education Objectives (CEOs):

The goal of this course is to provide students with an understanding of basic concepts of cloud computing along with cloud computing architecture, cloud management and cloud security.

**Course Outcomes (COs):** After course completion Students will be able to understand:

- Concept of cloud computing with broader perspective of cloud architecture and reference models.
- Theory of cloud Management and its security.
- Virtualization Technology Management.
- Applications of cloud computing with the help of some important commercial systems like Google App Engine, Microsoft Azure and Amazon.

### Unit-I

**Cloud Computing:** Introduction, Historical development, principles and vision, Cloud services requirements, Types of Clouds, Advantages and disadvantages of cloud computing, effect of cloud computing on human lives, Characteristics of Cloud Computing, Cloud and dynamic infrastructure, key elements in adopting cloud, Cloud adoption rudiments.

### Unit-II

**Architecture for Cloud Computing:** Cloud Computing Environments, Characteristics of cloud computing as per NIST, Concepts of Deployment Models and Service Models, Cloud Interoperability & Standards, Scalability and Fault Tolerance.

MCA311	Elective-I	Cloud Computing	3	0	0	3	60	20	20	0	0

**Cloud Solutions:** Cloud Ecosystem and its benefits, Cloud Business Process Management, Cloud Service Management.

**Cloud Offerings:** Cloud Analytics, Testing Under Control.

### Unit-III

**Cloud Management:** Resiliency, Provisioning, Asset management, Concepts of Map reduce, Cloud Governance, High Availability and Disaster Recovery. Market Based Management of Clouds, Federated Clouds/Inter Cloud: Characterization & Definition.

### Unit-IV

**Virtualization Technology:** Introduction, working process of virtualization and benefits of virtualization. **Type of virtualization:** Hardware Virtualization, Software Virtualization, Memory Virtualization, Storage Virtualization, Data and Network Virtualization, Desktop and Application virtualization. Technology used for virtualization, Hypervisor Virtualization Software, Virtual LAN (VLAN) and Virtual SAN (VSAN) with their benefits.

### Unit-V

**Cloud Security:** Introduction of cloud Information security services, Design principles, Secure Cloud Software Requirements, Policy Implementation, and Security Challenges. Introduction of cloud applications: ECG Analysis in the cloud. CRM and ERP, Social networking.

**Case study of cloud computing platforms:** Google App Engine, Microsoft Azure, Hadoop. Amazon.

**Course Education Objectives (CEOs):**

- Vision and Introduction toIoT.
- Understand IoT Market perspective.
- Data and Knowledge Management and use of Devices in IoT Technology.
- Understand State of the Art – IoT Architecture.
- Real World IoT Design Constraints, Industrial Automation and Commercial Building Automation in IoT.

**Course Outcomes (COs):**

At the end of the course the student will be able to:

- Understand the vision of IoT from a global context.
- Determine the Market perspective of IoT.
- Use of Devices, Gateways and Data Management in IoT.
- Building state of the art architecture in IoT.
- Application of IoT in Industrial and Commercial Building Automation and Real World Design Constraints

**Unit-I**

**Introduction to the internet of things** – origins, early concepts and products, Examples of current products and value propositions, Architectures and design patterns, Analysis of a full connected- object experience. State of the Art, challenges and future directions. Role of Cloud in IoT, Security aspects in IoT.

### Unit-II

**Elements of IoT:** Hardware Components- Computing (Arduino, Raspberry Pi), Communication, Sensing, Actuation, I/O interfaces. Software Components- Programming API's (using Python/Node.js/Arduino) for Communication Protocols-MQTT, ZigBee, Bluetooth, CoAP, UDP, TCP.

### Unit-III

**IoT Application Development:** Solution framework for IoT applications- Implementation of Device integration, Data acquisition and integration.

### Unit-IV

**Device data storage:** Unstructured data storage on cloud/local server, Authentication, authorization of devices.

### Unit-V

**IoT Case Studies:** IoT case studies and mini projects based on Industrial automation, Home Automation.

\***Teacher Assessment** shall be based on following components: Quiz/Assignment/Project/Participation in class activities, given that no component shall exceed more than 10 marks

**Course Education Objectives (CEOs):**

- Understand foundations of Distributed Systems
- Understand the network virtualization, remote method invocation and objects and RPC.
- Introduce the idea of peer to peer services and file system
- Methods of understanding clock synchronization protocols & replication
- Understand the issues involved in studying process and resource management

**Course Outcomes (COs):**

- Discuss trends in Distributed Systems
- Demonstrate an understanding of the challenges faced by future distributed systems
- Learn and apply the concept of network virtualization and remote method invocation
- Apply network virtualization in Real time systems like
- Analyze the mechanism of peer to peer systems, DFS and DNS.
- Understand key mechanisms and models for distributed systems including logical clocks,
- Causality, distributed mutual exclusion, distributed deadlocks.
- Design process and resource management systems.

**UNIT-I**

Concepts of Distributed Systems: Introduction, Goals of Distributed Systems, Examples of distributed Systems Distributed

Theoretical Foundation for Distributed System: Limitation of Distributed system, absence of global clock, shared memory, Logical clocks, Lamport’s & vectors logical clocks.

**UNIT-II**

Distributed Mutual Exclusion: Classification of distributed mutual exclusion, requirement of mutual exclusion theorem, Token based and Non Token based algorithms.

Distributed Deadlock Detection: system model, resource Vs communication deadlocks, deadlock prevention, avoidance, detection & resolution, centralized dead lock detection, distributed dead lock detection, path pushing algorithms, edge chasing algorithms.

**UNIT-III**

Agreement Protocols: Introduction, System models, classification of Agreement Problem, Byzantine agreement problem, Consensus problem.

Distributed Objects and Remote Invocation: Communication between distributed objects, Remote procedure call, Events and notifications.

**UNIT-IV**

Distributed File Systems: File service architecture, Sun Network File System, The Andrew File System.

Distributed Transactions: Flat and nested distributed transactions, Atomic Commit protocols, Concurrency control in distributed transactions, Distributed deadlocks, Transaction recovery

**UNIT-V**

Replication: System model and group communication, Fault-tolerant services, Transactions with replicated data. Distributed Algorithms: Destination based routing, APP (assignment problem in parallel), Deadlock free Packet switching, Introduction to Wave & traversal algorithms, Election algorithm.

\*Teacher Assessment shall be based on following components: Quiz/Assignment/Project/Participation in class (Given that no component shall be exceed 10 Marks)

**Course Educational Objectives (CEOs):**

- To familiarize the students with the need and scope of the subject.
- To build the mental makeup of the students for the field of data mining
- To develop a better understanding of the recent techniques like Support Vector Machine, Rough Set Theory etc as the tools of data mining.
- Using simple and well drawn illustrations develop students skills to discover knowledge to support the decision making process.
- To make the students well versed with the latest trends in data warehousing and data mining.

**Course Outcomes (Cos):** The student will be able to

- Understand the basic principles, concepts and applications of data warehousing and data mining
- introduce the task of data mining as an important phase of knowledge recovery process
- Ability to do Conceptual, Logical and Physical design of Data Warehouses, OLAP applications and OLAP deployment
- Have a good knowledge of the fundamental concepts that provide the foundation of data mining
- Design and implement a data warehouse or data mart to present information needed by management in a form that is usable for management client
- Design and implement the data pre-processing solutions for different applications
- Identify and use suitable data mining techniques for Knowledge Discovery
- Develop dashboard solutions for presentation of knowledge
- Explore the subject to start as a researcher

**UNIT –I**

Motivation, importance, Data types for Data Mining: Relation Databases, Data Warehouses, Transactional databases, Advanced Database System and its applications, Data mining functionalities: Concept/Class description, Association Analysis, Classification & Prediction, Cluster Analysis, Outlier Analysis, Evolution Analysis, Classification of Data Mining Systems, Major Issues in Data Mining.

**UNIT –II**

Data Warehouse and OLAP Technology for Data Mining: Differences between Operational Database Systems and Data Warehouse, a multidimensional Data Model, Data Warehouse Architecture, Data Warehouse Servers, Implementation of Data Warehouse, Data Cube Technology.

**UNIT-III**

Data Pre-processing: Problems with real world data, data pre-processing as a process, Data Cleaning, Data Integration and Transformation, Data Reduction, Discretization and Concept Hierarchy Generation. Data Mining Primitives, Languages and System Architectures, Concept Description: Characterization and Comparison, Analytical Characterization.

**UNIT –IV**

Mining Association Rules in Large Databases: Association Rule Mining: Market Basket Analysis, Basic Concepts, Mining Single-Dimensional Boolean Association Rules from Transactional Databases: different algorithms, the Apriori, Partition, Dynamic Itemset Counting, pincer search, FP tree Growth, Generating Association rules from Frequent items, Improving the efficiency of Apriori, Mining Multilevel Association Rules, Multidimensional Association Rules, Constraint-Based Association Mining.

**UNIT –V**

Classification, Prediction and Cluster Analysis: Issues regarding classification and prediction, Different Classification and Clustering Methods, Cluster Analysis, Applications and Trends in Data Mining: Data Mining Applications, currently available tools.

\***Teacher Assessment** shall be based on following components: Quiz/Assignment/Project/Participation in class activities, given that no component shall exceed more than 10 marks

**Course Education Objectives (CEOs):**

- To learn about different Cryptography Encryption and Decryption Technique.
- To understand the concepts of various asymmetric and symmetric algorithms.
- To understand the different aspects of Information Security and other security areas.

**Course Outcomes (COs):** Upon completion of the subject, students will be able to:

- Explain concepts of cryptography and ciphers.
- Describe advance encryption techniques and algorithms.
- Understand the key exchange protocols.
- Define information systems and its related security aspects.
- Explore different types of security including network, computer, internet security.

**Unit-I**

Cryptography: Concepts & Techniques: Introduction, Plaintext & Cipher text, Caesar Cipher, Substitution Techniques, Substitution Boxes (SBoxes), Permutation Cipher, Transposition Techniques, Encryption & Decryption, Symmetric and Asymmetric key Cryptography, Key Range & Key Size.

**Unit-II**

Symmetric Key Algorithm: Introduction of Block Ciphers, Overview of Symmetric Key Cryptography, DES (Data Encryption Standard) algorithm, Double DES Triple DES, AES, IDEA (International Data Encryption Algorithm) algorithm.

Q/A Quiz/Assignment/Affendance, MST - Mid Sem Test.

\*Teacher Assessment shall be based on following components: Quiz/Assignment/Project/Participation in class  
 (Given that no component shall be exceed 10 Marks)

**Course Educational Objectives (CEOs):**

- To familiarize the students with the need and scope of the subject.
- Provide an exposure giving a strong foundation to the data analytics practices.
- create a basis for the use of advanced investigative and computational methods to convert information to useful knowledge.
- To develop an understanding of how business analytics is actually performed
- covers foundational techniques and tools required for data science and big data analytics.

**Course Outcomes (Cos):** After the completion of the course the student will be able to

- Explain the information lifecycle from events in the real world to business actions,
- Recognize the types of events and characteristics that are often used in business analytics,
- Use the data captured by source systems and stored using both traditional and emergent technologies,
- Gain a high-level familiarity with relational databases and learn how to use a simple but powerful language called SQL to extract analytical data sets of interest,
- Appreciate the spectrum of roles involved in the data lifecycle, and gain exposure to the various ways that organizations structure analytical functions,
- Summarize some of the key ideas around data quality, data governance, and data privacy
- function on multi-disciplinary teams
- understand the professional and ethical responsibility
- present you with and structured around the broad contours of the different types of data analytics, namely, descriptive, inferential, predictive, and prescriptive analytics.
- to produce the good decision makers who can use empirical approaches, wide range of data analytic techniques to problem solving.

MCA332	Elective-II	Big Data Analytics	3	0	0	3	60	20	20	0	0

**PRE- REQUISITES:**

This course requires the familiarity with linear algebra, calculus, matrix operations, probability theory, statistics, programming, Database Management System.

**Syllabus**

**Unit I:**

**Measures of Central Tendency:** Mean, Median, Range, Mode, Variance, Standard deviation.  
**Correlation and Regression:** Linear Correlation, Correlation and Causality, Linear Regression, Linear Regression with Nonlinear Substitution.

**Statistical Concepts:** Population, Sample, sampled data, Sample space, sampling methods.

**Unit-II**

**Big Data:** Introduction and basics, Evolution of Data Management, Definition, Importance, Big Data Types, Structured and unstructured Data, Sources of big structured data and unstructured data, Architecture of Big Data Management System, Stages of Big Data Management.

**Big Data Technology Foundations:** Technology Components, virtualization, distributed computing, Cloud and Big Data, Integration of data types into a big data environment.

**Unit-III**

**Big Data and operational Databases:** relational, non-relational, key-value pair, document, column oriented, graph, spatial databases, MapReduce, Hadoop, Hadoop Foundation and Ecosystem, Appliances and Big Data Warehouse.

**Unit IV**

**Big Data Analytics:** Introduction, Basic and Advanced Analytics, Drivers, Pillars of Analytics: descriptive, predictive, and prescriptive. Core Components of analytical data architecture, Performance issues, Parallel vs. distributed processing, Shared nothing data architecture and Massive parallel processing, Elastic scalability, Data loading patterns.

**Data Analytics lifecycle:** Discovery, Data Preparation, Model Planning, Model Building, Communicating results and findings, Big data Implementation, Big Data Applications.

**Unit-V** Machine Learning, supervised and unsupervised learning, Classification, Classification Criteria, Naive Bayesian Classifier, use of regression and classification, Support Vector Machine, Challenges for Big Data Analytics, Clustering, Association Rule Mining.

**Data Science Tools:** Cluster Architecture vs. Traditional Architecture, Introduction to R, Data Manipulation and Statistical Analysis with R, Basics, Simple manipulations, Numbers and vectors, Input/ Output, Arrays and Matrices, Loops and conditional execution, functions, Data Structures, Data transformations, Strings and dates.

### Unit-I

**Introduction To Python:** Basic Concept, characteristics, Features, various flavours of python, limitations of python, versions of python, Python-2 and Python-3 differences, python installation on windows, Identifiers, keywords, data types, type casting, use of comments in python, variables and constants, various operators used in python.

### Unit-II

**Input-output, Conditional, Iterative and Transfer Statements:** Basic simple programs using input and output statements. Decision Making statements: if statement, if-else statement and nested if statement. Iterative statements: For Loop, While loop, nested loops. Transfer statement: break, continue and pass statement.

### Unit-III

**Python Strings, List, Tuples and Functions:** Definition, accessing characters or values of a String, Updating Strings, String Special Operators, String Formatting Operator, Triple Quotes, Python Lists, python Tuples, list Vs tuples, python functions, python dictionary.

### Unit-IV

**Python File Handling:** types of files, opening and closing a file with various modes, deleting a file.

**Python exceptions and Assertions:** exception handling, Exception Handling Vs Assertions:

**Python OOPs Concepts:** Introduction of Class and Object, creating class and its instance, constructor (Parameterized Constructor and Non-Parameterized Constructor), destructors, polymorphism, inheritance (Multilevel and multiple), data abstraction.

**List of Practical:**

1. Write python program to print Hello World.
2. Write a program to perform different Arithmetic Operations on numbers in Python.
3. Write python program to Hello World using string variable.
4. Write python program to show use of conditional statement.
5. Write a python program to find largest of three numbers.
6. Write a Python program to convert temperatures to and from Celsius, Fahrenheit.  
 [ Formula :  $c = (f-32)/1.8$  ]
7. Write python program to store data in list and then try to print them.
8. Write python program to print list of numbers using for loop.
9. Write a python program to find factorial of a number using loop.
10. Write python program to store strings in list and then print them.
11. Write a program to create, append, and remove lists in python.
12. Write a program to demonstrate working with tuples in python.
13. Write a program to demonstrate working with dictionaries in python.
14. Write python program to let user enter some data in string and then verify data and print welcome to user.

15. Write python program in which a function is defined and calling that function prints Hello World.
16. Write python program in which a function(with single string parameter) is defined and calling that function prints the string parameters given to function.
17. Write python program in which a class is define, then create object of that class and call simple print function define in class.
18. Write a python program to define a module to find Fibonacci Numbers and import the module to another program.
19. Write a python program to define a module and import a specific function in that module to another program.
20. Write a script named copyfile.py. This script should prompt the user for the names of two text files. The contents of the first file should be input and written to the second file.
21. Write a program that inputs a text file. The program should print all of the unique words in the file in alphabetical order.
