Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P - Practical; C - Credit;

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Educational Objectives (CEOs):

To impart the knowledge for understanding elementary aspects of hydrology and Fluid Hydraulics for use in the planning, design, and management of water resources projects. Also to impart understanding of introductory aspects of integrated water resources development and management.

Course Outcomes (COs):

Student will be able to

1. Understand hydrologic data observation, processing, and analysis.
2. Learn methods of flood estimation and flood routing
3. Understand ground water development and utilization.
4. Learn soil, water, crop relationship and irrigation requirement.
5. Learn canal design procedure and familiarization with various hydraulic structures.

Syllabus:

UNIT I

9 Hrs.

Hydrology: Hydrological cycle; Precipitation and its measurement; Rain gauge networks; Estimating missing rainfall data, mean depth of precipitation over a drainage area; Mass rainfall curves, in-tensity-duration curves and depth-area duration curves; Infiltration and infiltration indices; Evaporation and its measurement.

UNIT II

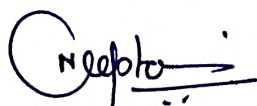

8 Hrs.

Runoff and Floods: Stream gauging; Run off and its estimation; Unit hydrograph derivation and application, S-curve hydrograph, synthetic unit hydrograph, Types of floods and methods of estimation; Flood routing through reservoirs and channels; Flood control measures; Economics of flood control.

UNIT III

9 Hrs.

Ground Water and Well Irrigation: Aquifer properties, hydraulics of wells under steady flow conditions; Ground water recharge-necessity and methods of improving ground water storage; Types of well, specific capacity and specific yield; Advantages and disadvantages of well irrigation.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P - Practical; C - Credit;

***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Educational Objectives (CEOs):

1. To enable the student to have a good grasp of all the fundamental issues in these advanced topics in structural analysis.
2. To introduce the students to concept of structural stability and advanced methods in structural analysis.

Course Outcomes (COs):

Student will be able to

1. Analyze determinate and indeterminate structure with side sway.
2. Apply flexibility matrix to analyze any structure related to civil engineering works.
3. Apply stiffness matrix to analyze any structure related to civil engineering works.
4. Fundamentals of plastic analysis and use the same in practical applications.

Syllabus:

UNIT I

8 Hrs.

Sway Analysis: Moment Distribution method in analysis of frames with sway; Analysis of box frames; Analysis of portals with inclined members; Analysis of beams and frames by Kani's Method.

UNIT II

9 Hrs.

Approximate Methods for Lateral Loads: Analysis of tall frames, wind and earthquake loads; Codal provisions for lateral loads; Approximate analysis of multistoried frames for vertical and lateral loads.

UNIT III

8 Hrs.

Matrix Analysis (Flexibility Matrix): Introduction; Basic Concepts (Axis and Coordinates); Evaluation of flexibility matrix; Analysis of continuous beams using system approach.

UNIT IV

8 Hrs.

Matrix Analysis (Stiffness Method): Introduction; Basic Concepts (Axis and Coordinates); Evaluation of stiffness matrix; Analysis of Continuous Beams using system approach.

UNIT IV

9 Hrs.

Irrigation Water Requirement and Soil-Water-Crop Relationship: Irrigation, necessity, irrigation development in India; Soils, suitability, wilting coefficient and field capacity; Consumptive use and its determination; Irrigation methods; Duty of water, factors affecting duty; Crops and crop seasons, principal crops and their water requirement, crop ratio and crop rotation, intensity of irrigation.

UNIT V

8 Hrs.

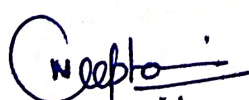

Canals and Structures: Types of canals; Canal alignment, Kennedy's and Lacey's silt theories, typical canal sections; Canal losses, lining-objectives, materials used, economics; Introduction to hydraulic structures viz. dams, spillways, weirs, barrages, canal regulation structures.

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Educational Objectives (CEOs):

The objective of this course is to provide the students necessary geotechnical engineering skills to analyze and design shallow and deep foundation systems under different loading and soil conditions.

Course Outcomes (COs):

Students will be able to

1. Understand the different types of foundation and suitable foundation system for a structure.
2. Understand about various analysis and design of foundations.
3. Identify and assess ground conditions and suggest method of improvement.

Syllabus

UNIT I

9 Hrs.

Shallow Foundations and Bearing capacity: Type of foundations shallow and deep; Bearing capacity of foundation on cohesion less and cohesive soils; General and local shear failures; Factors effecting bearing capacity of soil; Theories of bearing capacity - Prandtl, Terzaghi's, Skempton, Meyerhof and Hansan; Indian standard code for bearing capacity; Limits of total and differential settlements; Plate load test.

UNIT II

9 Hrs.

Deep Foundation and Estimation of capacity piles foundation: Pile foundation-introduction, types of piles; Estimation of individual and group capacity of piles in cohesion less and cohesive soils; Static and dynamic formulae; Pile load test, settlement of pile group; Negative skin friction; Well foundation. Equilibrium of wells; Analysis for stability for tilts and shifts, remedial measures.

UNIT III

9 Hrs.

Soil Improvement Techniques: Compaction, factors affecting compaction, properties of soil affected by compaction; Field and laboratory methods; Proctor compaction tests; Equipment for field compaction and their suitability. **Soil Stabilization:** Mechanical, lime, cement, bitumen, chemical, thermal, electrical stabilization, and stabilization by grouting; Geo-synthetics, types, functions, materials and uses; Introduction to Stone Columns methods

UNIT IV

8 Hrs.

Soil Exploration and Deep Excavation: Soil exploration, methods of soil exploration; Planning of exploration programme for buildings, highways, and earthen dams; Disturbed and undisturbed samples and samplers; Basics of Deep Excavation, Excavation Support Systems, Construction Techniques and Equipment, Groundwater Control in Excavation

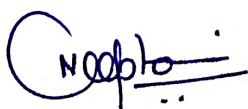

UNIT V

8 Hrs.

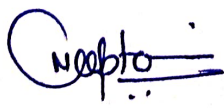

Machine foundation and Soil Structure Interaction: Modes of vibration; Mass-spring analogy; Natural frequency; Effect of vibration on soils; Vibration isolation; Design criteria for impact type of machine; Introduction to Soil Structure Interaction and its effects.

Text Books:

1. Soil Mechanics and Foundation Engineering – Dr. K. R. Arora, Standard Publishers, Delhi, 2020.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P - Practical; C - Credit;

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Educational Objectives (CEOs):

Student will be able to analyze structure for various loads and will be able to design different structural systems, as per provisions of latest IS: 800:2007.

Course Outcomes (COs):

Students will be able to

1. Analyze various loads and design bolted and welded connections.
2. Design compression and tension member.
3. Design different types of beams and girders.
4. Design structures trusses and industrial frames.

Syllabus

UNIT I

8 Hrs.

Connections: Properties of steel; Structural steel sections; Limit State Design Concepts; Loads on structures; Design of structural connections-Bolted and Welded connections; Eccentric connections.

UNIT II

9 Hrs.

Tension Members: Design of tension members and its connections; Use of lug angles; Concept of shear lag; Concept of splices and gusset plate.

UNIT III

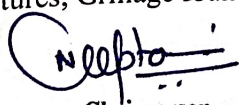

8 Hrs.

Beams: Design of simple beams; Concept of web buckling and web crippling; Concept of laterally supported and laterally unsupported; Built-up beams; Design of plate girders.

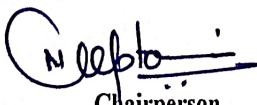

UNIT IV

8 Hrs.

Compression Members: Design of single section and compound section of compression members; Design of Column; Design of laced and battened type columns; Design of footings for steel structures; Grillage foundation.

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Educational Objectives (CEOs):

1. To inculcate the essentials of Civil Engineering field to the students of all branches of Engineering.
2. To provide the students knowledge regarding estimation of quantities involved in Civil Engineering works.

Course Outcomes (COs):

Students will be able to

1. Prepare rough and detailed estimate of buildings for different items.
2. Gain knowledge of specifications of different items of building.
3. Perform rate analysis of different work items.
4. Understand contracts, accounts and arbitration.

Syllabus

UNIT I

8 Hrs.

Introduction: Purpose and importance of estimates; Principles of estimating; Types of estimates, plinth area rate, cubical content rate, preliminary, original, revised, and supplementary estimates, measurement sheet and abstract sheet.

UNIT II

8 Hrs.

Analysis of rates: Various factors involved in the rate of an item, material and labour requirement for various trades; Preparation for rates of important items of work brick work, plain cement concrete and plastering; Bill of quantities (B.O.Q.); Schedule of rates. (S.O.R.)

UNIT III

9 Hrs.

Detailed Estimates: Preparing detailed estimates of various types of buildings using long wall-short wall method and centre line method; Calculation for R.C.C. works for structural members like beam, column and slab; Bar bending schedule (B.B.S.)

UNIT IV

8 Hrs.

Specifications: Necessity of specification, types of specifications.

Contracts: Essentials of contracts, types of engineering contracts – advantages and disadvantages

Tenders: Tender forms, tender documents, and notices – time limits, necessity, E Tendering.

UNIT V

9 Hrs.

Cost of Works: Factors affecting cost of work, overhead charges; Contingencies and work charge establishment; Preparation of DPR.

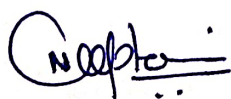

Valuation: Purposes, depreciation, sinking fund, scrap value, year's purchase, gross and net income, dual rate interest; Methods of valuation; Rent fixation of buildings.

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P – Practical; C - Credit;

***Teacher Assessment** shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Educational Objectives (CEOs):

The aim of this course is to teach students about the traffic characteristic, traffic studies, intelligent transportation system and accidental studies in traffic engineering.

Course Outcomes (COs):

Student will be able to

1. Understand the traffic characteristics.
2. Perceive the knowledge about different studies involved in traffic engineering.
3. Get knowledge about component intelligent transport system.
4. Get knowledge about accident studies and mass transportation.

Syllabus

UNIT I

6 Hrs.

Traffic Characteristics: Road user's characteristics; Physical, mental and emotional factors; Factors affecting reaction time, PIEV theory; Vehicular characteristics- Characteristics affecting road design-width, height, length and other dimensions; Weight, power, speed; Braking capacity of a vehicle.

UNIT II

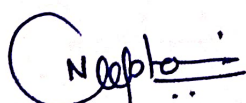

6 Hrs.

Traffic Studies: Spot Speed Studies and Volume Studies; Speed and Delay Studies; Origin and destination Studies (O & D), Various methods, collection and interpretation of data, planning and sampling; Traffic Capacity Studies- volume, density, capacity and level of service; Parking Studies-methods of parking studies cordon counts, space inventories, parking practices.

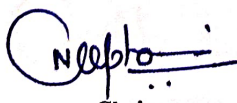

UNIT III

7 Hrs.

Introduction to Intelligent Transportation Systems (ITS) : Definition of ITS and Identification of ITS objectives; Historical background; Benefits of ITS - ITS data collection techniques – detectors, Automatic Vehicle Location (AVL), Automatic Vehicle Identification (AVI); Geographic Information Systems (GIS); Video data collection.

UNIT IV

7 Hrs.

Traffic Operations and Control: Traffic regulations and various means of control; One way streets- advantages and limitations; Traffic signals- isolated signals, coordinated signals, simultaneous, alternate, flexible and progressive signal systems; Types of traffic signals, fixed time signals, traffic actuated signals, speed control signals, pedestrian signals, flashing signals, clearance interval; problems on single isolated traffic signal.

UNIT V

7 Hrs.

Accident Studies and Mass Transportation:

(A) Accident Studies: causes of accidents; Accident studies and records; Condition and collision diagram, Preventive measures, modern methods of road safety

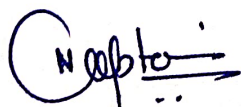

(B) Expressways, freeways and metro rail; Problems on mass transportation and remedial measures; Brief study of mass transportation available in the country

Text Books:

BTCE605N (1)	DSE	Traffic Engineering	60	20	20	30	20	2	0	2	3

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P - Practical; C - Credit;

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

List of Experiments.

1. Study of Road user characteristics
2. Study of Traffic volume
3. Study of Intersection volume
4. Study of Small-network volume
5. Study of Origin-Destination (OD) Volume
6. Study of traffic speed
7. Speed & delay studies
8. Travel-time studies
9. Accident studies

BTCE605N (2)	DSE	Air Quality Monitoring and Control	60	20	20	30	20	2	0	2	3

Legends: L - Lecture; T - Tutorial/Teacher Guided Student Activity; P - Practical; C - Credit;

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

Course Educational Objectives (CEOs):

1. To provide a comprehensive overview of air and noise quality.
2. To understand the science and technology associated with the monitoring and control.

Course Outcomes (COs):

Students will be able

1. To acquire knowledge and understanding to evaluate air quality management and analyze the causes and effects of air pollution.
2. To identify the sources of air and noise pollution.
3. To understand the concepts involved in control technologies.

Syllabus

UNIT I

5 Hrs.

Air pollution problem: Economics and social aspects; Historical episodes of air pollution; Sources of air pollution; Effects of air pollution on health, animal, plants, and materials.

UNIT II

6 Hrs.

Role of meteorological condition; Properties of typical air pollutants; Air diffusion and Concentration of pollutants; General diseases caused by air pollutants; Toxicity of various pollutants; Plume patterns and height of chimneys; Atmospheric chemistry and formation of secondary pollutants.

UNIT III

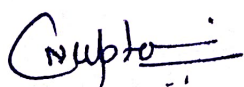

6 Hrs.

Sampling and Analyzing of Air Pollutants: Instrumental sampling of pollution; Standards of Air Pollution; Principle of air pollution control; Site selection and zoning; Introduction to various control methods, process, and equipment.

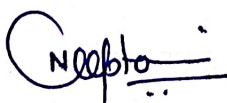

UNIT IV

7 Hrs.

Air pollution control legislation; Public education; Status of air pollution control in various countries; Industrial Hygiene: Concept and importance; Factory involved in environmental hazards; Industrial ventilation occupational diseases; Control methods.

*Teacher Assessment shall be based following components: Quiz/Assignment/ Project/Participation in Class, given that no component shall exceed more than 10 marks.

UNIT V

6 Hrs.

Basics of acoustics and specification of sound; Sound power, sound intensity and sound pressure levels; Plane, point, line and multiple sources; Outdoor and indoor noise propagation; Psychoacoustics and noise criteria, effects of noise on health, Noise standards and limit values; Noise instrumentation and monitoring procedure.

Text Books:

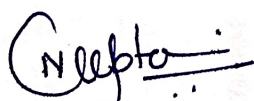

1. Fundamentals of Air Pollution – Raju, B. S. N. (2018). Oxford & IBH Publishing Co. Pvt. Ltd.
2. Air Pollution – M. N. Rao & H. V. N. Rao. Tata McGraw Hill

References:

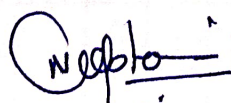

1. Air Pollution – Faith, W. L. John Wiley & Sons.
2. Air Pollution – McCabe, L. C. McGraw Hill, International.
3. Air Pollution – Stern, A. C. Academic Press, New York.

List of Experiments.

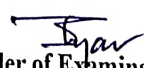

1. To study about the Ambient Air Quality standards.
2. To study the Air Sampling techniques.
3. To study about the Low and High-volume samplers.
4. To study the particulate pollution on roads using digital equipment.
5. To study the Indoor Air Quality (IAQ) and its monitoring.
6. Sampling of respirable particulate matter in the ambient and indoor environment.
7. To measure the ambient concentrations of particulate matter by using High Volume Sampler (HVS)
